American Micro-Fuel Devices Unveils RideMaxx

January 4, 2008, Washington:

American Micro-Fuel unveils RideMaxx™, an EFI controller for Harley Davidson. A wireless remote handlebar module that easily mounts onto any sized handlebars enables the rider to switch conveniently and seamlessly between one of either three fuel injection control settings with the touch of a thumb. The RideMaxx™ handlebar module communicates wirelessly with the included ECU module for instant changes on the fly. The ECU module is easily plugged in to the ECU under the seat to communicate with the handlebar module. RideMaxx™

is truly plug-and-play and comes pre-loaded with power and fuel consumption maps, providing the rider the choice to ride at their preferred setting. The Power choice boasts an improvement of up to 15% in horsepower. The Economy choice offers a long distance rider the preference to conserve fuel, and to enjoy up to an added 25 miles per tank; while the automatic setting lets RideMaxx™ alternate between the two settings custom to the ride offering a live and seamless power and performance improvement. RideMaxx™ gives any

level of rider a thumbs' touch control over Fuel Injection and is recognized as the world's leading fuel management system; completely cable free, truly plug-and-play, and Bluetooth enabled. American Micro-Fuel brings improved perfection to fuel injection with RideMaxx™, the EFI controller delivering more seamless power, more mileage, and a much more luxurious ride.
